

# Object Creation

Person p = new Person()

Steps:-

- 1) Space Allocation
- 2) Parsing
- 3) Constructors

4) this

BA b = new BA()

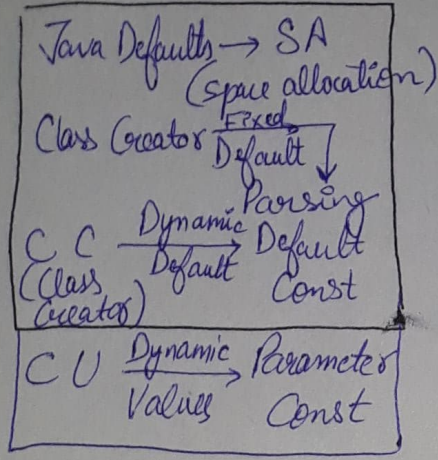

BA	
i	= -1
m	= 0
S rate	= 4 %

Stg a) During space allocation java puts the default values

Stg b) In parsing the code inside class before constructors is taken care of.

acc  
money

~~Stg c)~~

## \* this Chaining

Capability of one constructor to call another constructors

eg BA(int a)

```

{
    BA() this();
    this.amt += a;
}
    
```
